

# BLOCKADER® Arches and Gates

## For safer, more efficient crowd management

- a. Positive interlocking system
- b. Bolts for hanging signs
- c. Alternating off-set base for better stability
- d. Variable width gates at a standard height
- e. All the weight of gate is supported on wheels, unlike a weak hinge
- f. Heavy duty latch with lockable insert
- g. Heavy duty 0.80 aluminum signs are available in different sizes.

- Arches with signs provide clearer directions/instructions to attendees
- Gates provide necessary openings for officials, police, or emergency personnel
- BLOCKADER® was the first to introduce arches and gates for steel barriers
- Largest inventory—immediate shipment
- Breaks down to a small package that is easy to store
- Custom matched arches for gates

### Flexible Gates in All Standard Lengths

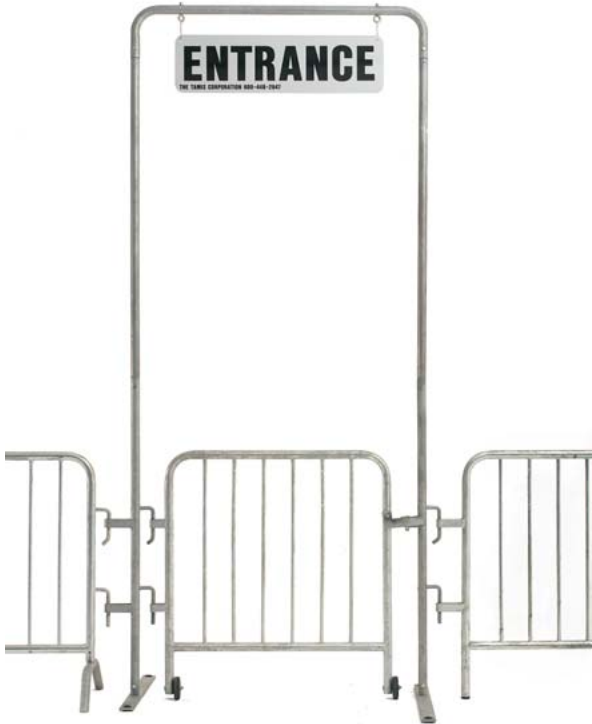

**Arches and Gates are available through the BLOCKADER® Nationwide Rental Program**

## **BLOCKADER**<sup>®</sup> Arches and Gates

### **Barrier accessories — for more efficient crowd management**

Arches and gates make steel barriers more functional by channeling the direction of crowds at your event, and helping lines move faster. When crowds are where you planned them to be, and when they can clearly see specifically designated areas, your personnel will receive far fewer questions.

#### **Arches**

- The standard 10-foot high arch gives you an ideal location to place a sign high above the crowd
- Ideal for designating your entrance
- Visually distinguish separate entrances for different types of attendees (i.e. general, VIPs, vendors, handicapped, etc.)
- Specify areas such as "Lost Children" so patrons know exactly where to go
- Combine arch and turnstile to collect entrance revenue
- Variable width arches available

The pioneer in arches and gates, BLOCKADER<sup>®</sup> is constantly revising and modifying our design to best serve our customers. Our recently redesigned arch features modular components, making it easier to transport, store, and set up.

#### **Gates**

Use gates intermittently among long-running lines of barriers to allow controlled access through the line. This will enable officials, police, and EMS personnel to open a gate when necessary for official/emergency purposes.

For crowd traffic flow, a gate can also act as a "floodgate" to relieve heavy congestion. Gates provide you with a necessary "emergency back door" in case of unforeseen circumstances.

- BLOCKADER<sup>®</sup> commercially introduced gates in 1990
- Gates swing in or out
- All the weight is on the wheels (not on the hinged side)
- Heavy-duty steel latch locks gate into the next steel barrier for a continual run of connecting frames
- Standard international lengths in stock to match most basic hook variations.
