

NEW!
Best Selling Barrier

The Standard Blockader® meeting today's needs for delineation and portability

- A superior, Blockader-quality barricade – at a low price
- Friendly, easy-to-carry barricade – ideal for line delineation
- Fully compatible interlocking with Classic Blockader barricades

Designed for today's barrier applications

The Standard Blockader was developed to meet the demands of today's barrier customers for a high-quality, lower-priced product for line delineation.

Blockader's high-volume worldwide production enables Standard Blockader barriers to be economically-priced. Yet, it retains the design features of the heavy-duty Classic Blockader barricade.

12,000 frames in Blockader inventory at all times!

New Concept

Combination ID Panel/Carrying Handle

- The steel panel (9.5 inches by 5 inches), welded to the frame prior to hot-dip galvanizing, can be used for your identification sign or decal
- The steel tubing welded to the bottom of the ID sign panel becomes a balanced carrying handle
- The carrying handle bar is rounded so it will not pinch or cut your fingers. The barrier will be balanced between your fingers

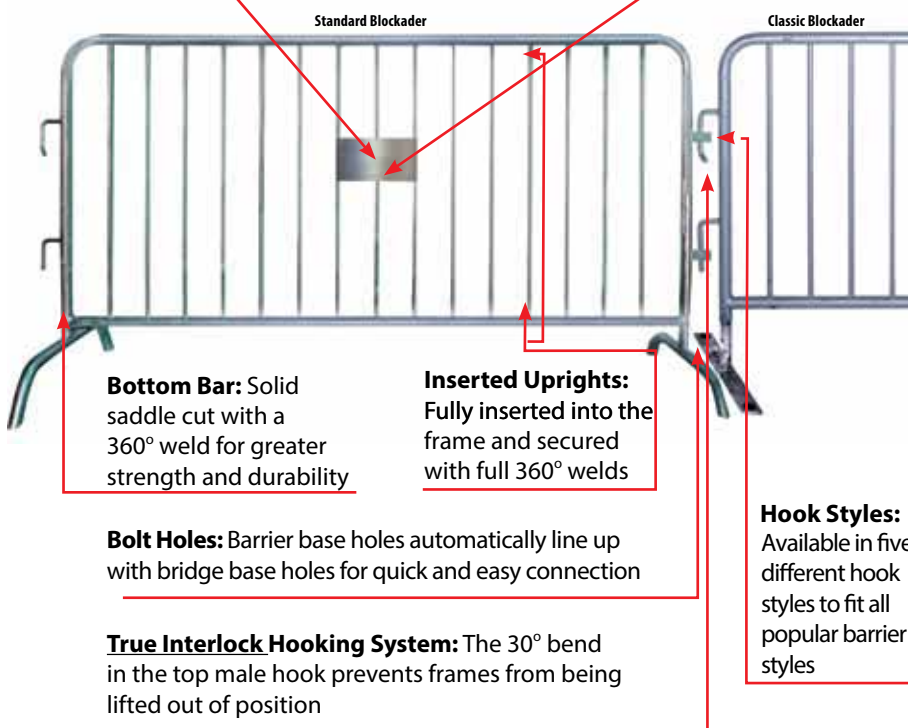

The Standard Blockader®

A new model – designed to meet the demands of today’s barrier applications

ID Plate/Sign: Steel panel welded to frame prior to hot-dip galvanizing can be used for your decal

Sign Carry Handle: Steel bar welded to the bottom of the sign panel is rounded so it will not pinch or cut your fingers

Bottom Bar: Solid saddle cut with a 360° weld for greater strength and durability

Inserted Uprights: Fully inserted into the frame and secured with full 360° welds

Bolt Holes: Barrier base holes automatically line up with bridge base holes for quick and easy connection

True Interlock Hooking System: The 30° bend in the top male hook prevents frames from being lifted out of position

Hook Styles: Available in five different hook styles to fit all popular barrier styles

Three different lengths are available including the popular 6.5 foot and 8 foot long barriers

Best Selling Barriers

Balanced Base Design: Enables barriers to be stable when placed at right angles

Available In Three Popular Styles:

- Classic Blockader-Style Bridge Base
- Low Profile Flat Base
- Square Standing Frames

Guaranteed Blockader Quality

- Fully compatible with Classic Blockader barricades so all hooks will align
- A true interlocking hook system to maintain the integrity of a line of barriers – so frames can not be simply lifted out of position
- Uprights are fully inserted into the frame before welding, not spot-welded onto the frame
- True galvanization for the best corrosion protection (not just plated)

of a line of barriers – so frames can not be simply lifted out of position

Blockader Eliminates Risks

Here’s what you risk if you buy other lower-priced barriers

- Non-compatible hooks, resulting in orphan inventory
- Simple hooks (sometimes only one hook) and no interlock.
- Weaker spot-welded uprights more susceptible to breaking
- Simple zinc plating or paint, resulting in faster corrosion.
